New Course
BIOETHICS AND SOCIETY
Medical History and Bioethics 728

Spring 2008
Social Work 106
Fridays 9-11:30 am

The aims of this course are to provide understandings of the broader social, cultural and political contexts in which bioethical debates and medical practice occur, to explore social science perspectives on medicine and bioethics and to examine the use of qualitative and interdisciplinary methods to conduct research in these areas. Readings and discussion will draw upon research using ethnographic, life history, content, visual and narrative analysis. The course will cover issues in both clinical and public health settings, and may emphasize one or the other depending on the interests of enrolled students. It is designed for the needs of graduate students in the social sciences and humanities, population health sciences, health policy, law, medicine, and health professions.

(instructor consent required)

Instructors:

Linda Hogle PhD (lfhogle@wisc.edu) is a medical anthropologist in the Department of Medical History and Bioethics. Her work explores stem cell and tissue engineering policy and ethics; socio-cultural, political and ethical issues in emerging biomedical technologies; transnational issues in transplantation and medical device development.

Claire Wendland MD PhD (cwendland@wisc.edu) is a medical anthropologist in the Departments of Anthropology, Obstetrics and Gynecology, and Medical History and Bioethics. Her research and teaching interests include the globalization of biomedicine, particularly in Africa; professional education and values; cross-cultural ethics and cross-cultural communication in medical practice.
